

Charlotte Beaudry : Pleasure (2013)

Silicon, aluminium, servomotor, electronic components

Protruding from the wall, an articulated index finger (1:1 size) performs a repetitive movement, slowly folding in on itself as if to say "Come closer".

FRONT VIEW :

REAR VIEW :

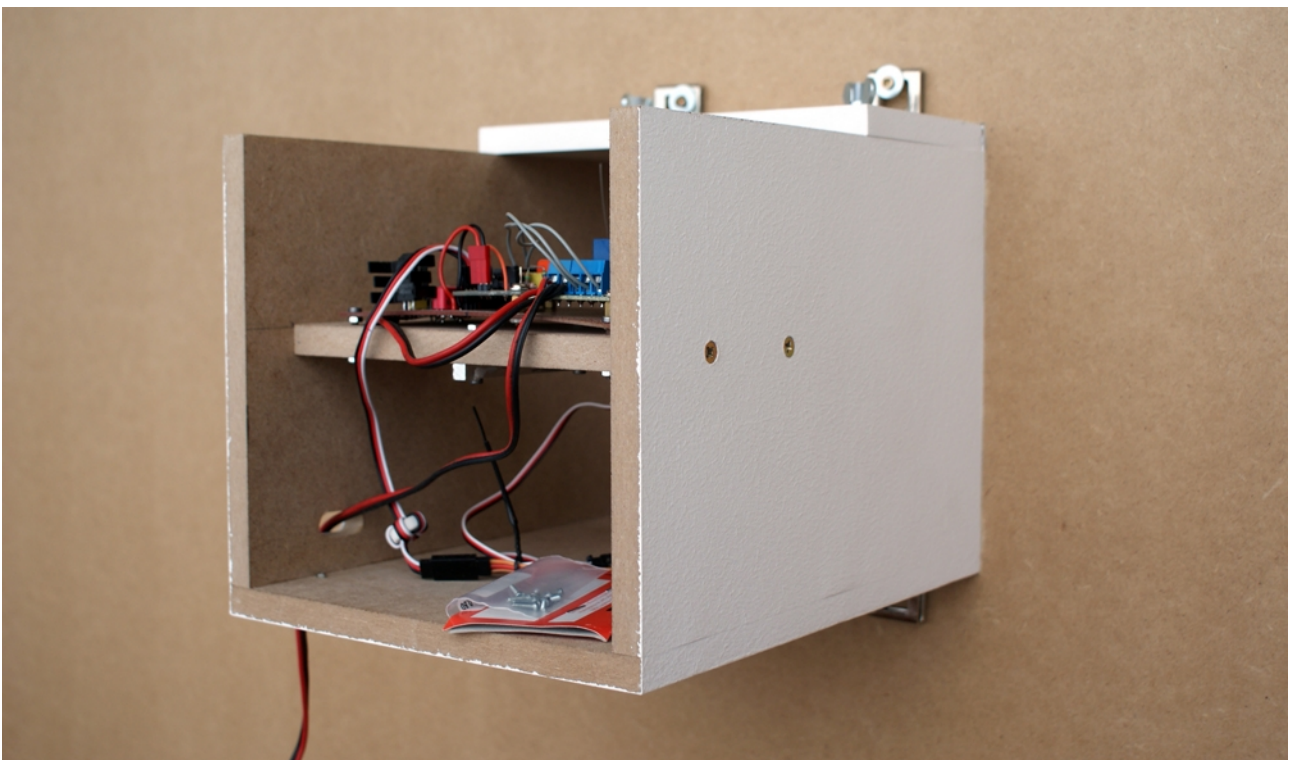

FRONT VIEW (setting up) :

the white painted front face of the box is incrustated on the wall edge in order to make it invisible to the viewer.

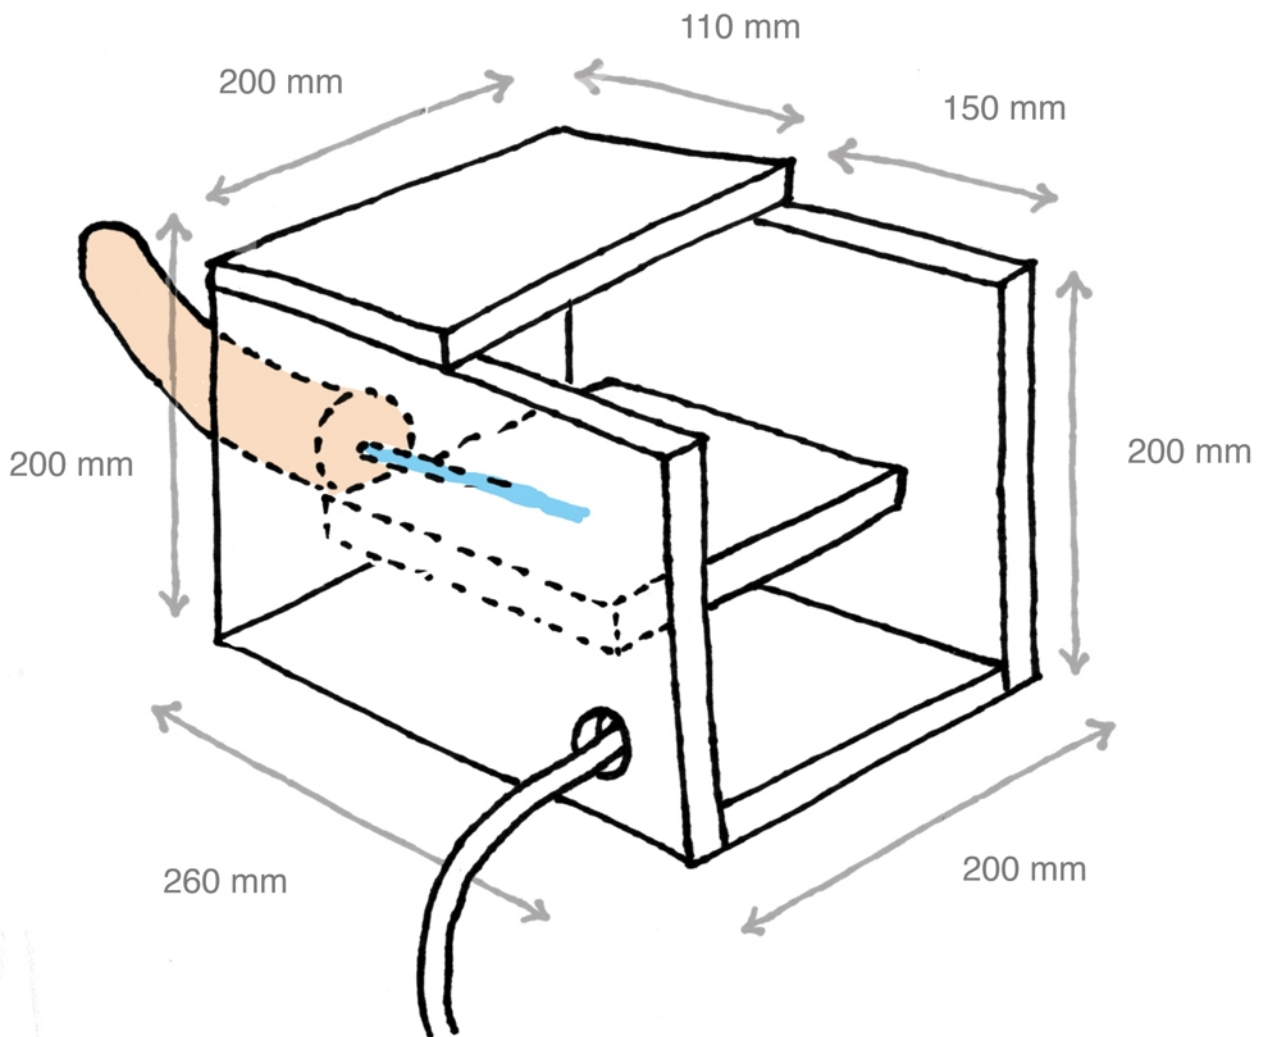

**REAR VIEW :**

a MDF box containing an electronic component and a cable retraction system of the silicone finger. The box is equipped with 4 metal pieces (with rails, screw and wing nut), to adapt its attachment to the thickness of the wall. Attached to the box: a power supply including a transformer connected to the actuator system, and to be connected to 220 volts.

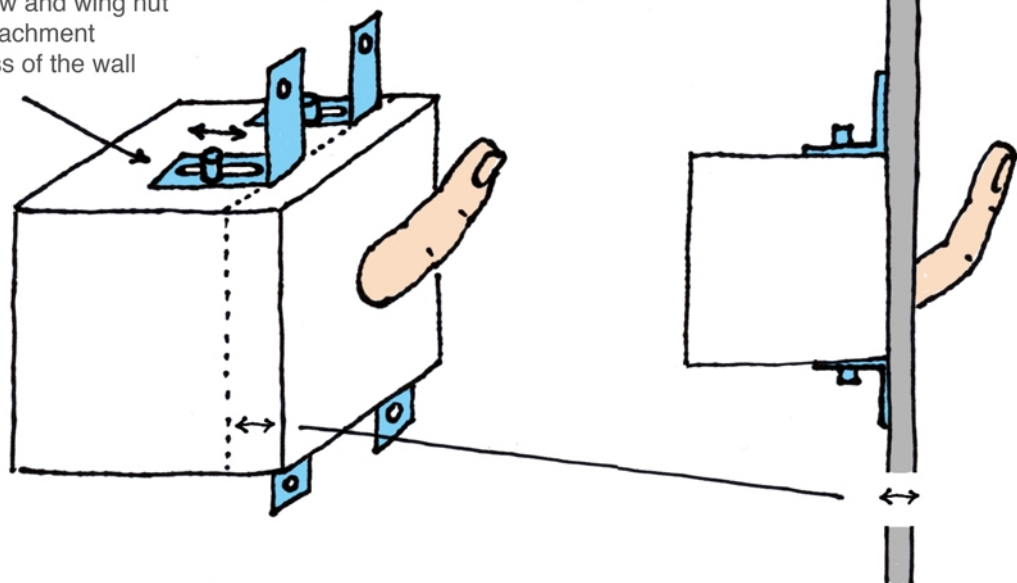

DEVICE

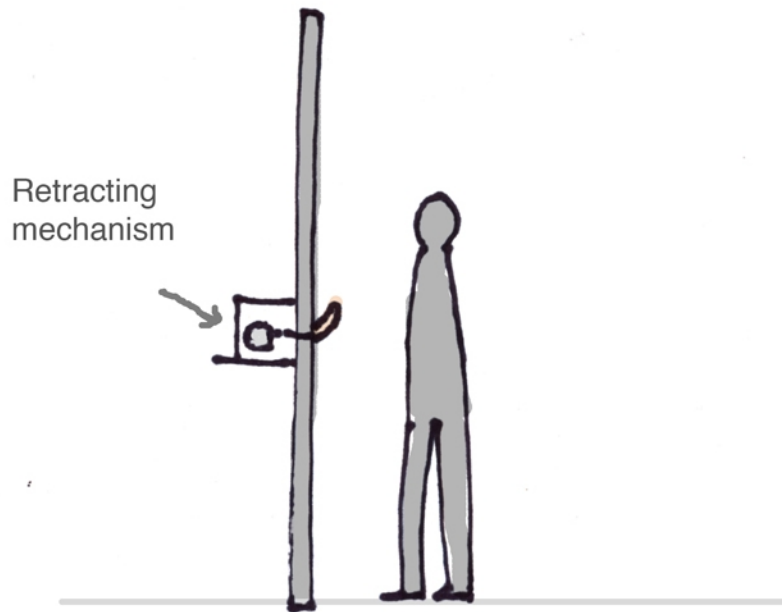

A MDF box containing an electronic component and a cable retraction system of the silicone finger. The box is equipped with 4 metal pieces (with rails, screw and wing nut), to adapt its attachment to the thickness of the wall.

HEIGHT

FINGER MOVEMENT

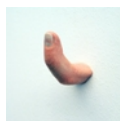

Finger retraction duration: about 3 sec.

Movement frequency: about every 10 sec.

Relaxed

Retracted

POWERING

Connected to the box: a power supply including a transformer to be connected to 220 volts.

CABLE LENGHT

From the sculpture box to the transformer : 1,3 m

From the transformer to 220 volts : 1,3 m

An extension cord should be need.

SWITCHING ON / OFF

When the device is installed, it will be switched on by a stage manager.

To switch off the device, please wait until the finger is **relaxed**.
